- Worked as a Software Developer in **Digital Refresh Network Pvt Ltd** in Mumbai from Feb 2020 to May 2021.
- Worked as a Software Developer at **Ascra Technologies** in New Mumbai from July 2018 to January 2020.
- Worked as a Software Developer at **Peafowl Designs IT Solution** in Pune from January 2017 to June 2018.

EDUCATION

- **BE** From MMIT College Under **Pune University,** with 56.40**%** in 2016.
- **HSC** From Nandigram Jr. College NandurGhat **Aurangabad Board,** with 59.00**%** in 2011
- **SSC** From Vasant Vidyalaya Kaij **Aurangabad Board,** with 59.38**%** in 2009.

PROJECT EXPERIENCE SUMMARY

Project Name	**Nokia Mediation**
Organization	LTI Mindtree
Description	Nokia Mediation is a Malaysia based Ecommerce web application that consists of various modules implemented such as RCT, Rejected Data, Buffered Data, Scheduled execution, Dashboard, Alert, Stream, Network, Reports. In the rct records are corrected by record correction tools, which are used to correct rejected data. Data collected from the network will be rejected if it does not meet the evaluation criteria before processing. Nodes processing the data in the stream will store rejected records in their rejected data storage. Rejected data can be corrected for the entire rejected storage summary of the node by using the batch processing option, and in batch processing there are three options: take offline, reprocess, and correct even if one or more records are selected. The buffered data is waiting to be processed by a node. There would be a list of the top ten buffered data streams in the report. If the buffered data breaches the configured threshold limit of the node. Scheduled execution shows nodes that have already executed or are awaiting execution. The Alert listing displays data for active and all alerts in three types of streams: node info, failed, and warning. The bar chart and area chart graph were created according to the rejected data and streams using the rechart library.
Environment	ReactJS, CCFK, Redux, Rechart, Visual Studio, Putty, GIT, DayJs, Jira, SonarQube, ES lint, Jest
Role	▪ Working on individually module and area and bar and line chart graph ▪ Co-ordinate with co-developers and keep project manager well informed of the status of development effort. ▪ Analysis of defects and provided Defect fixes within time.

Project Name	UNICEF-RCH 2.0
Organization	LTI Mindtree
Description	UNICEF-RCH is an e-government healthcare application dedicated to managing healthcare data digitally. It provides information about pregnant women, newborns, and mothers, and offers counselling on high-risk pregnancies and family planning. I have enhanced the HRP and MCP modules by implementing a new feature that creates and stores MCP cards for every pregnancy. These digital MCP cards gather data from the beneficiary's profile and generate a QR code. The tracking of HRP beneficiaries varies based on their status, ensuring proper management until the end of the PNC period. Additionally, I have provided support and programming for a quick turnaround time in fixing bugs related to user management and the geo and non-geo modules.
Environment	React JS, Redux, Next JS, Node JS, Typescript, Key cloak, GIT, Axios, SonarQube, ES Lint, Jest.
Role	▪ The Government of India to enables saving Aadhar card Details, Medical Data and Other Sensitive Information. ▪ Have lead Bug Support team and Formed Xtreme programming for very quick turnaround time for Fixing Bugs. ▪ Managing team and Individual Contributor ▪ Create Test Cases ▪ Good team co-ordinations.

Project Name	Cartus
Organization	LTI Mindtree
Description	Cartus is a US based Real Estate web application specially dedicated for provide services like real estate brokerage, international corporate relocation programs, and settlement services, The product consists of various modules implemented Home, search functionality, about us, contact us, relocation services, content pages, login, it also has technology, a resource hub with all landing pages, and a press landing page etc. Cartus has helped relocating employees and their families find their way to new homes, new communities, and new experiences. Using Gatsby, grouped dropdowns, I frame, Pardot forms, feed plugins, and search functionality, you can find specific data in Cartus.
